

What is Optek concrete repair products, our products are specifically designed to meet the high demands of concrete repairs unlike any product on the market today.

Our unique formulas not only repair they also attack issues like spalling in reinforced concrete and converting corrosion to an iron oxide coating inside the concrete, and it also imparts lost chemicals back to the substrate, it will harden surfaces and form a repair that's better and stronger than before.

With more than 100 years in knowledge every Optek product has been tested to achieve the results in individual applications, our Cementitious Chemist is on hand to answer any questions you may have, unlike other concrete repair suppliers, we manufacture here in Australia solely keeping locals in jobs.

We are so sure we can find a solution to your problems, we can inspect your site issues, make the correct recommendation, train your own personnel and if required we can even arrange to complete the works for you with our experienced team of contractors you can rest assured the jobs done properly

You can join the countless numbers of industry bodies already using Optek products from Government to Water Authorities and everything in between we know you can trust Optek to get things done right.
